

Figure 23. Effects of LPEE, LPEAF, and LPAF on reducing power activity. The mixture of sodium phosphate buffer, potassium ferricyanide, as well as LPEE, LPEAF, and LPAF was prepared and incubated for 20 min at 50 °C. TCA was added subsequently and centrifuged to obtain supernatant for the measurement at 700 nm. Data shown are mean \pm SE of at least two independent experiments with minimum three replicates each.
