LIST OF FIGURES

Figure 1.1: The Global Flyway Map ................................................................. 2
Figure 1.2: The East Asian-Australasian Flyway .............................................. 4
Figure 1.3: Total number and proportion of globally threatened and Near Threatened waders in the flyways of the world ........................................... 6
Figure 1.4: Factors that commonly influence the foraging habitat selection by waders ........................................................................................................... 8
Figure 3.1: Location of Jeram and Remis Beaches on the Selangor Coast on the West Coast of Peninsular Malaysia ................................................................. 37
Figure 3.2 (a): The study sites in Jeram Beach ................................................... 38
Figure 3.2 (b): The study sites in Remis Beach ................................................... 38
Figure 3.3 (a): The design of sampling plots in Jeram Beach .............................. 39
Figure 3.3 (b): The design of sampling plots in Remis Beach .............................. 39
Figure 3.4: Some species of waders recorded presence in study areas ............... 46
Figure 3.5: Percentage of wader’s families recorded during sampling ............... 48
Figure 3.6: Percentage of wader species in study areas .................................... 48
Figure 3.7: Total wader densities in all months .................................................. 49
Figure 3.8: The pairwise difference between months ......................................... 51
Figure 3.9: The abundance of waders in the sampling areas throughout sampling periods .............................................................................................................. 55
Figure 3.10 (a): The abundance of waders in all sampling plots in Jeram Beach .... 56
Figure 3.10 (b): The abundance of waders in all sampling plots in Remis Beach .... 56
Figure 3.11: Percentage of wader distribution status ......................................... 58
Figure 3.12 (a): Diversity of waders in Jeram and Remis Beaches during migratory and non-migratory seasons ................................................................. 58
Figure 3.12 (b): Species richness of waders in Jeram and Remis Beaches during migratory and non-migratory seasons ......................................................... 59
Figure 3.12 (c): Density of waders in Jeram and Remis Beaches during migratory and non-migratory seasons ................................................................. 59
Figure 3.13: Trend of wader abundance during study period .............................. 60
Figure 4.1: Map of Jeram and Remis Beaches, Selangor ........................................77
Figure 4.2: The abundance of waders during high tide and low tide.....................81
Figure 4.3: Percentage of waders engaged in a variety of behaviours at study sites .....81
Figure 4.4: The differences in wader’s abundances between tidal states within intervals
periods ..............................................................................................................................83
Figure 5.1: Feeding rate of four selected wader species........................................98
Figure 5.2: Positive correlation between bill size and time spent for foraging by waders
........................................................................................................................................102
Figure 5.3: Percentage of habitat use by wader species........................................104
Figure 6.1: Frequency of responses shown by different species of waders towards
disturbances........................................................................................................................122
Figure 6.2: Percentage of response of waders upon disturbance .........................123
Figure 6.3: Preferred distance by waders towards sources of disturbances ..........124
