

List of Plates

Plate 3.1	Aluminum foil wrapped conical flask due to the high photo sensitivity index of metal oxalate ligands	48
Plate 3.2	High pressure semi-batch reactor, (1) electric motor (2) electric motor – reactor shaft lever (3) pressure regulator (4) gas hose (5) HDO reactor (6) product sampling port (7) pressure gauge (8) reactor shaft	57
Plate 3.3	Gas chromatograph–mass spectrometer (GC–MS)	58
Plate 3.4	STA 449 F1/F3 with Automatic Sample Changer (ASC)	59
Plate 3.5	FTIR spectroscopy instrument (OPUS v7.0, Bruker Optics). 1. Product sampling zone, 2. Gas supply units, 3. Mild temperature furnace, 4. Furnance temperature display	60

List of Schemes

Scheme 3.1	Simplified proposed mechanism for the HDO kinetics of oleic acid	67
Scheme 4.1	Structure of oleic (a) and stearic (b) acids	76
Scheme 4.2	Simplified proposed mechanism for the HDO kinetics of oleic acid	95
Scheme 4.3	Mechanism of hydrodeoxygenation of oleic acid via stearic acid into octadecane biofuel	116
Scheme 4.4	Simplified lumped mechanism for the HDO kinetics of oleic acid	191
