CHAPTER 1 SLOPE STABILISATION: REVEGETATION OF THE SLOPE
1.1 Introduction............................................................................1
1.2 Bioengineering Technique.......................................................2
1.2.1 Bioengineering in the Tropics ............................................4
1.3 Problems................................................................................5
1.4 Philosophy of Studies...............................................................5
1.5 Leguminous Tree as a Pioneer Slope Plant..............................7
1.6 Research Objectives...............................................................9
1.7 Scope of Study.......................................................................10

CHAPTER 2 LITERATURE REVIEW: THE INFLUENCE OF VEGETATION ON STABILITY OF SLOPE
2.1 Introduction............................................................................11
2.2 Root Reinforcement...............................................................13
2.2.1 Shear Strength of Soil and Soil-Root System.................13
2.2.2 The Effect of Root System on Shear Strength..............16
2.2.3 The Effects of Stratigraphy on the Stabilising Effects of Roots..................................................16
2.2.4 Stability Analysis .............................................................16
2.3 “Soil-Plant-Atmosphere” Continuum..................................19
2.4 The Environmental and Physiological Nature of Stress
2.4.1 Water Stress.......................................................................20
2.4.2 Acidic Soil........................................................................20
2.4.3 Carbon Sink Potential......................................................21
2.5 The Process of Natural Succession
2.5.1 The Concept of Natural Succession
2.5.2 Natural Plant Succession of the Slope
   (a) Biomass
   (b) Soil Development and Nutrient Flows
   (c) Species Diversity
   (d) Stability
2.5.3 Model of Plant Succession of the Slope
2.6 Introduction to Leucaena leucocephala
2.6.1 General Aspects
   (a) Origin and Distribution
   (b) Botany
   (c) Establishment and Germination
   (d) Rhizobium Requirements
   (e) Multipurpose Uses
2.6.2 An Erosion Control Plant
2.6.3 Acid-Tolerant Plant
2.7 The Need for Investigation

CHAPTER 3 THE EFFECT OF SOIL TYPE ON GROWTH OF L. LEUCOCEPHALA
3.1 Introduction
3.2 Materials and Methods
   3.2.1 Soil and Plant Materials
   3.2.2 Morphological Studies
   3.2.3 Physiological Studies
      (a) Photosynthetic Rate and Chlorophyll Content
      (b) Dry Weight Partitioning and Biomass
3.2.4 Statistical Analysis
3.3 Results and Discussion
   3.3.1 Plant Growth Performance
   3.3.2 Photosynthetic Rate and Chlorophyll Content
   3.3.3 Dry Weight Partitioning
   3.3.4 Nodulation
   3.3.5 Ranking Analysis of Physiological Parameters
3.4 General Discussion
CHAPTER 4 PHYSIOLOGICAL RESPONSES OF L.LEUCOCEPHALA TO DROUGHT CONDITIONS

4.1 Introduction .................................................. 53

4.2 Materials and Methods

4.2.1 Plant Materials ................................................. 53

4.2.2 Measurements

(a) Leaf Water Potential ........................................... 54

(b) Relative Water Content ....................................... 54

(c) Photosynthesis, Transpiration Rate, Water Use Efficiency and Stomatal Conductance ....... 54

4.2.3 Soil Water Profiles ............................................. 55

4.2.4 Statistical Analysis ........................................... 55

4.3 Results and Discussion

4.3.1 Leaf Water Potential .......................................... 57

4.3.2 Relative Water Content ....................................... 57

4.3.3 Photosynthesis, Transpiration and g_s Responses .................. 61

4.3.4 Water Use Efficiency ........................................ 64

4.3.5 Influence of LWP on Stomatal Conductance .................... 64

4.3.6 Influence of LWP on Photosynthetic Rate ..................... 68

4.4 General Discussion .............................................. 68

CHAPTER 5 CARBON SINK POTENTIAL OF L.LEUCOCEPHALA

5.1 Introduction ................................................... 72

5.2 Materials and Methods

5.2.1 Plant Materials ............................................... 73

5.2.2 CO₂ and Light Response Curves ......................... 73

5.3 Results and Discussion

5.3.1 Carbon Dioxide Response Curves ............................ 74

5.3.2 Relationship between g_s, C_bar, Transpiration Rate and C/C_o Ratio ............... 82

5.3.3 Water Use Efficiency ........................................ 86

5.3.4 Light Response Curve ....................................... 91

5.3.5 Photosynthetic Components and Leaf Water Potential ....................... 94

5.4 General Discussion ............................................. 97

CHAPTER 6 A MICROCLIMATE TRIAL : ADAPTATION OF L.leucocephala ON ACIDITY

6.1 Introduction .................................................. 101
CHAPTER 7  ROOT PROFILE OF L. LEUCOCEPHALA

7.1 Introduction ........................................................................ 122

7.2 Materials and Methods

7.2.1 Plant Materials ................................................................ 122

7.2.2 Measurements

(a) Photosynthesis, Transpiration Rates and Stomatal Conductance ........................................................................ 123

(b) Root Length Density ................................................................ 123

(c) Water Absorption Capacity .................................................. 123

(d) Leaf Area and Biomass ......................................................... 125

7.2.3 Statistical Analysis ......................................................... 125

7.3 Results and Discussion

7.3.1 Root Growth Rate ......................................................... 125

7.3.2 Root Length Density ...................................................... 128

7.3.3 Water Absorption Capacity ............................................. 134

7.3.4 Dry Weight Partitioning and Biomass ............................... 134

7.3.5 Root/shoot Ratio ............................................................ 134

7.3.6 Photosynthesis, Transpiration Rates and Stomatal Conductance and Water Use Efficiency ................................. 141

7.4 General Discussion ............................................................ 141
CHAPTER 8  SHEAR BOX TEST: SOIL-ROOT MATRIX SHEAR STRENGTH

8.1 Introduction ........................................................................................................ 147
8.2 Materials and Methods
   8.2.1 Plant Materials ............................................................................................ 148
   8.2.2 Shear Box Apparatus ................................................................................ 148
   8.2.3 Laboratory Testing ...................................................................................... 150
8.3 Results and Discussion
   8.3.1 Shear Strength, Cohesion and Friction Angle
         (a) Six-month Trial ....................................................................................... 150
         (b) Twelve-month Trial ............................................................................... 156
         (c) Comparison of Two Trials .................................................................... 159
   8.3.2 Residual Strength ..................................................................................... 163
   8.3.3 Root Profiles of All Species Studied ....................................................... 166
   8.3.4 Relationship between Shear Strength and Root Profiles ...................... 172
   8.3.5 Shear Strength and Physiological Criteria ............................................. 172
8.4 General Discussion ............................................................................................ 175

CHAPTER 9  THE CONTRIBUTION OF L. LEUCOCephala TO NATURAL SUCCESSION

9.1 Introduction ....................................................................................................... 181
9.2 Materials and Methods
   9.2.1 Plant Materials .......................................................................................... 182
   9.2.2 Natural Succession Experiment ............................................................... 182
         (a) Transplanting ......................................................................................... 184
         (b) Experimental Design ............................................................................ 184
   9.2.3 Measurements
         (a) Gross Parameters .................................................................................. 184
         (b) Root and Soil Water Profiles ............................................................... 188
         (c) Soil Penetrability .................................................................................. 188
         (d) Shear Strength ...................................................................................... 189
9.3 Results and Discussion
   9.3.1 Physiological Performance of L. leucocephala ...................................... 189
   9.3.2 Growth Rate ............................................................................................. 189
   9.3.3 Performance of the Plant Community
         (a) Species Diversity ................................................................................... 193
             (i) Performance of Pioneer Species ...................................................... 197
             (ii) Performance of Dominant Successors ......................................... 199
(b) Leaf Area Index ............................................. 201
(c) Biomass ..................................................... 201

9.3.4 Stability of the Slopes
(a) RLD of Plant Community .................................. 207
(b) Soil Penetrability .......................................... 207
(c) Shear Strength ............................................. 211
(d) Soil Water Content ......................................... 213

9.4 General Discussion ........................................... 213

CHAPTER 10 THE CONTRIBUTION OF L.LEUCOCEPHALA TO SLOPE STABILITY – A TRIBUTE

10.1 Introduction .................................................. 224

10.2 The Pioneering Characteristics of L.leucocephala
10.1.1 Drought Resistance Mechanisms ......................... 224
10.1.2 A Carbon Sink Potential ................................ 225
10.1.3 An Acidic Tolerant Species .............................. 226
10.1.4 Engineering Properties of L.leucocephala
(a) Root Profile ................................................ 226
(b) Soil-Root Matrix Shear Strength .......................... 226

10.3 Can L.leucocephala be a Good Pioneer? ..................... 227

10.4 The Contribution of L.leucocephala to Slope Stability .... 228

10.5 Interaction with Various Parameters ...................... 228

10.6 Contribution of the Project ................................ 232

10.7 Challenges Ahead .......................................... 232

10.8 Conclusion and Recommendations ......................... 233

BIBLIOGRAPHY .................................................. 234

APPENDIX 1 ..................................................... 248

APPENDIX 2 – 19 ................................................ 249

APPENDIX 20 .................................................... 267

APPENDIX 21 ..................................................... 272
